

**mySAP ERP Transition and  
Upgrade Consulting Services**

## **SAP® ACCELERATED VALUE ASSESSMENT FOR mySAP™ ERP**

### **INFORMATION SHEET**

#### **Why This Service?**

**Taking the guesswork out of IT strategy planning**

Deciding which solution to deploy at what level can be a challenge, and tying IT initiatives to strategic goals can seem impossible.

With shrinking budgets and expanding demands, companies are under enormous pressure to deploy the right solutions at an affordable price. And those solutions must support the business goals of the enterprise as it grows and evolves.

Without a clear method for analyzing solutions and their potential value, you are left with nothing more than an educated guess about the financial impact they will have.

#### **The Value for You**

**Quantifying the value potential of mySAP™ ERP and developing a road map for smooth transition**

The SAP® Accelerated Value Assessment for mySAP™ ERP helps you make the right decision on when and how to transition from SAP R/3® to mySAP ERP software. It quantifies the business and IT value potential enabled by mySAP ERP and establishes a road map for smooth transition – a map aligned with corporate business strategy.

The value assessment leverages SAP's long experience in IT strategy planning, which is directed toward achieving highest value. The outcome of the assessment is a document that provides the basis for choosing mySAP ERP.

## When to Use

### When you are asked to quantify the value potential enabled by mySAP ERP

The assessment will help SAP R/3 customers prepare and justify the decision to upgrade to mySAP ERP. Use the service if the following criteria apply:

- Your organization is currently using SAP R/3 software
- You are planning a decision on when and how to implement mySAP ERP
- The complexity of your organization is low to medium

If your organization is complex, you may require further SAP value-based services for evaluating mySAP ERP. These include the value assessment services provided by Business Consulting, a group within SAP Consulting.

## Delivery in Detail

The service consists of four major phases:

- Preparation
- Analysis
- Design
- Final presentation

Many accelerators, available to all phases, ensure smooth execution within a few days.

## Preparation

Before executing the service, you must refine the expectations and the scope of the assessment. Approximately five to eight interviews are scheduled, and interview invitations are sent out.

## Analysis

This phase focuses on the interviews with business and IT senior management. The aim of the analysis is to understand selected business processes and to learn about specific pain points and business process metrics. The interviews are realized within two days.

## Design

Based on the information gathered and analyzed, the assessment team evaluates and quantifies the value potential enabled by mySAP ERP. Specific value benefits are weighed against ease-of-implementation criteria. These are the major components of the implementation road map proposal for mySAP ERP.

## Final Presentation

The final management presentation summarizes the key elements supporting the decision for mySAP ERP.

## Prerequisites

To ensure a smooth delivery of the assessment, you should first secure:

- The participation of business and IT senior managers (CEOs, CFOs, and so forth; line-of-business managers)
- A project room and other appropriate facilities

## Order Information

This service can be ordered by contacting the SAP Service Marketplace at [www.service.sap.com/ufg](http://www.service.sap.com/ufg).

For additional information on the SAP Accelerated Value Assessment for mySAP ERP, please refer to the SAP Service Marketplace at [www.service.sap.com/ufg](http://www.service.sap.com/ufg).

**Note:** This assessment is designed primarily for customers using SAP R/3. The contents of the service and the delivery method are subject to change. Changes are necessary so that the assessment can remain flexible to the demands of the various SAP products you employ in your business.
