

Migration to SAP BusinessObjects XI from the SAP BusinessObjects Portfolio of Solutions

SAP Consulting

Why SAP BusinessObjects XI Solutions?

One BI standard

- BusinessObjects XI solutions are seen as the best business intelligence platform.

Completely integrated data and BI services

- The business intelligence platform to deliver a comprehensive solution and a unified view of your (un)structured data sources – wherever the data is stored and wherever you are located.

Trusted decision quality

- By using BusinessObjects Data Services software, BusinessObjects XI 3.1 delivers a transparent, single version of the truth with common business semantics. It provides traceability of data back to the source for easier understanding, which provides a foundation for trusted decisions.

SAP BusinessObjects XI 3.1

The Business Intelligence Platform

All information

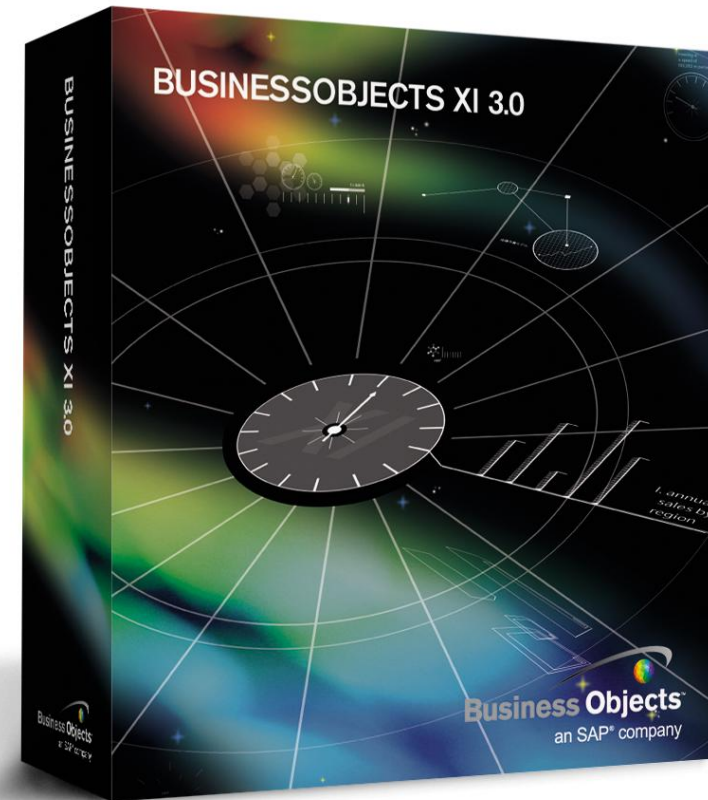

- Unified view
- Best on SAP and non-SAP environments
- Trusted decision quality

All people

- Full-spectrum BI
- Next-generation user experience
- Alignment of teams and business networks

One platform

- Complete integrated data and BI services
- Adaptive and extensible services
- Choice of delivery model

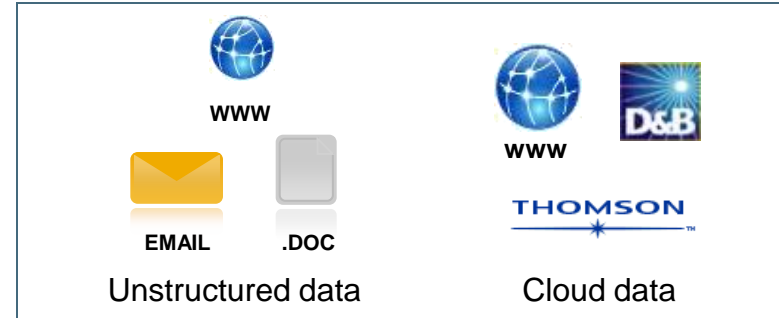

All Information

More Confident Decision Making

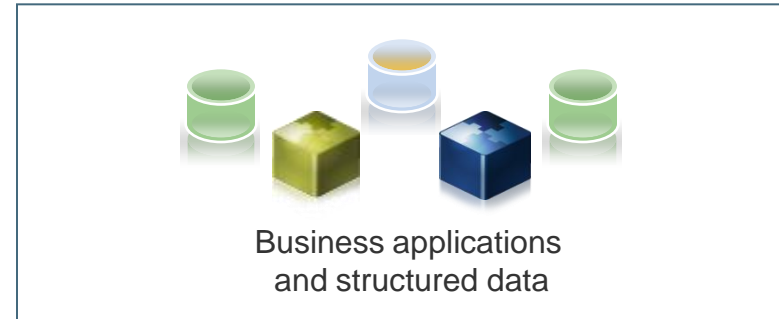

Unified view

- Quantitative and qualitative insight through text analysis
- Consumable third-party data through information on demand

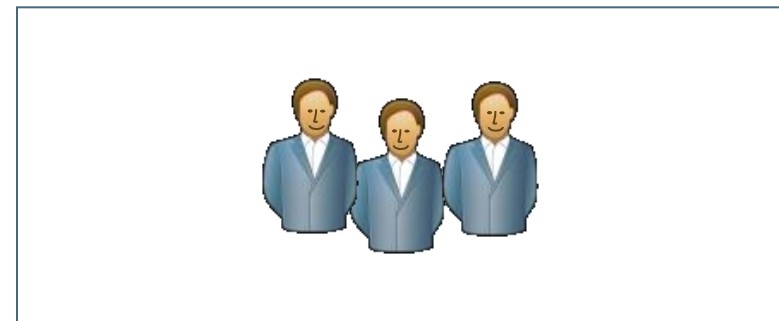

Best on SAP and non-SAP environments

- Best support for SAP data
- Unmatched application connectivity

Trusted decision quality

- Data quality
- Transparency
- Common business semantics

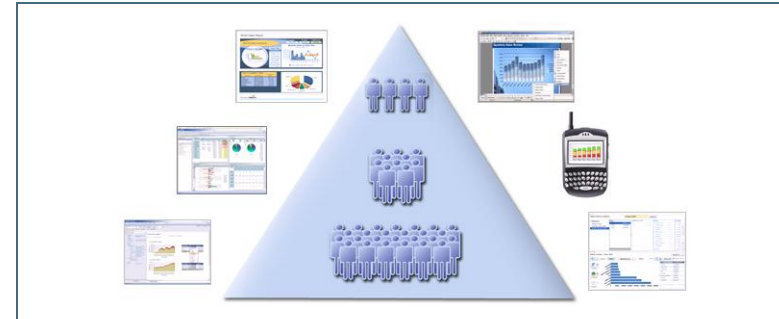

All People

More Aligned Teams, People, and Ecosystems

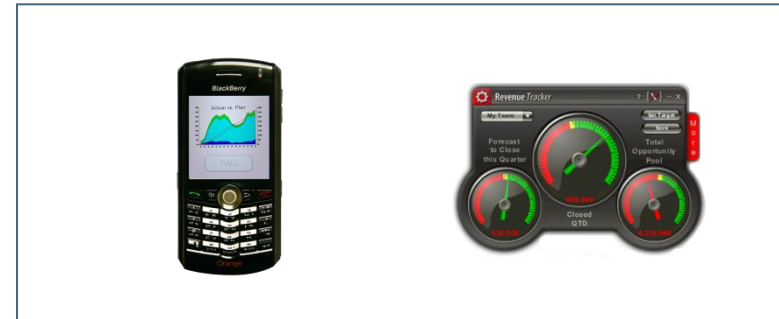

Full-spectrum BI, including intuitive discovery and powerful, predictive:

- Reporting
- Query and analysis
- Discovery
- Dashboards and Visualization
- Predictive

Next generation user experience

- Simple
- Contextual
- Where you work

Alignment of teams and business networks

- Remove all sharing boundaries through repository replication
- Extend your BI beyond the firewall
- Publish trusted and personalized insight to one person or thousands of people

One Platform

Most Complete, Trusted, and Agile Platform

Complete, integrated data and BI services

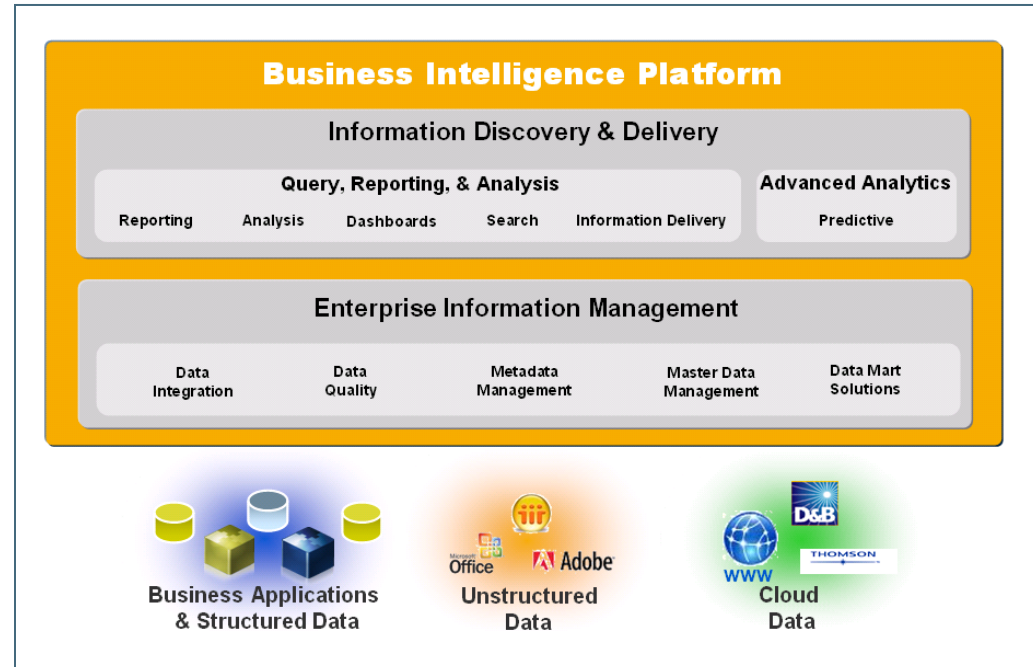

- Data integration
- Data quality
- Metadata management
- Integrated administration

Adaptive and extensible services

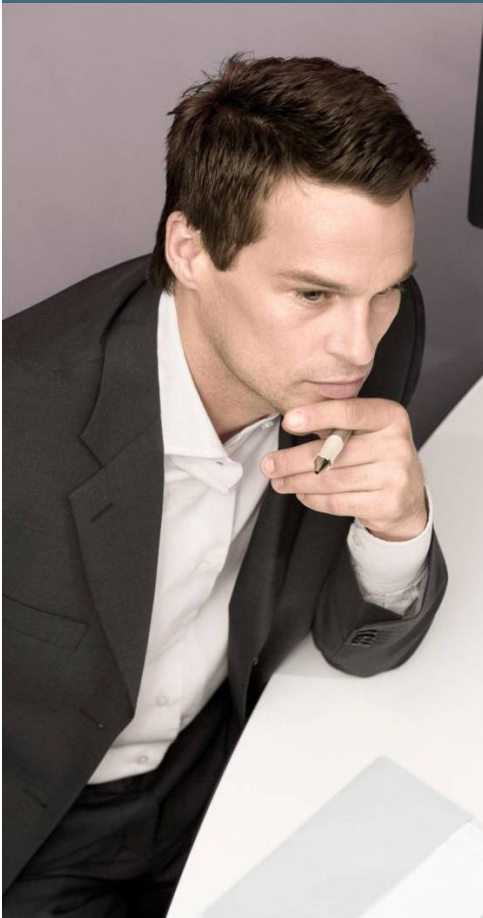

- Agile information management
- Flexible, open service-oriented architecture

Choice of delivery model

- On-premise
- Appliance
- On-demand

Upgrading to XI is necessary to keep pace with changing technology:

- Requires comprehensive BI skill set on both platforms
 - Hard to find people who know both platforms (current and to-be) and who have the required XI migration experience that can help to cut down the unnecessary trial and set up the right approaches at the beginning.
- Resource management concern
 - Even if all the resources can be found internally, it will be a big challenge to allocate all these resources to create a migration plan in a short period of time.
 - Report conversion can often be reduced dramatically by aligning to a key performance indicator (KPI) driven approach

Migration just don't happen –
they must be planned for and executed properly for success

Next steps

Migrations require:

- Learn from our experience
 - We bring in the upgrade expertise and lessons learned from many other customers where we have provided BI upgrade services
- Reduce risk
 - Using SAP Consulting reduces the risk of migration challenges, problems, and delays
- Save time
 - You don't need to waste time figuring out best practices for what needs to be done or how to do it
- Control cost
 - Predefined consulting services help predict project costs.
 - The Global Delivery group of SAP Consulting migrates reports quickly and cost-effectively
