

WEB COMMUNICATIONS – WITHOUT BARRIERS

SAP® Acrobat Connect Professional Applications by Adobe

The SAP® Acrobat Connect Professional applications by Adobe give SAP customers the ability to share information and communicate with the world without the technical and procedural barriers that have so often thwarted the promise of the Web. Using technology that already exists on more than 98% of the world's Internet-connected microcomputers, SAP Acrobat Connect Professional applications transform rapid communications and rapid learning from promise to reality.

Your ability to do business is only as strong as your ability to communicate – with your employees, your partners, and your customers. Through the first decade of the 21st century, the Web has promised instant communications – yet it has been disappointingly slow to deliver them. In fact, for anyone who's had to do a last-minute driver installation, plug in a download, or devise a work-around due to inflexible software, Web communications and live e-learning have proven more of a frustration than a solution.

The SAP® Acrobat Connect Professional applications by Adobe change all that. Since these applications work with Adobe Flash, over 98% of the world's Internet-connected microcomputers are already fully configured to use them. No matter whether those in your communications or knowledge network work with a PC, a Macintosh, or a Linux system, they most likely already have Adobe Flash installed. This means no downloads or complex configurations are necessary to begin your Web conferences or training sessions.

Since SAP Acrobat Connect Professional applications reside completely within your corporate firewall, they bring you the total security that a hosted solution can't. Since all your information, whether about users or systems, resides on your servers in your own environment, there is no need to reconfigure firewalls to meet the needs of external providers. You control all decisions about infrastructure, installation options, and timelines for upgrades. You decide how to configure the system to best meet your needs regarding server load, bandwidth access, and user management. And since you can integrate SAP Acrobat Connect Professional applications with LDAP, Web portals, PBXs, or other existing systems and make use of the proven extensibility of Adobe Flash, you can create custom communication applications that go far beyond traditional Web conferencing.

Configurations to Meet Your Needs

SAP Acrobat Connect Professional applications are available in two different configurations, each designed to meet your particular needs.

SAP Acrobat Connect Professional Meeting by Adobe

The faster and more effectively you can learn, communicate, and collaborate, the more productive your organization will be – whether your goal is to build your internal knowledge network; carry out change management activities; reach more prospects, customers, and partners; sell more effectively; or speed time to market. The SAP Acrobat Connect Professional Meeting application by Adobe lets you effortlessly establish real-time, on-demand virtual meeting rooms and Web conferences incorporating document sharing and collaboration, live and recorded video, Adobe Flash movies, live screens, applications, audio, and multiuser text chat.

SAP Acrobat Connect Professional Meeting also features a user interface that is far more flexible and adaptable than that of competing products. Your company can easily configure the meeting environment to reflect your own corporate look and feel, in-

cluding company colors and logos. Your meeting hosts can instantly configure their work space to meet the needs of individual Web conferences (for example, application sharing, live e-learning, discussion, or collaboration) or decide whether to communicate using live multipoint video and voice over IP. And since each licensed user can have an “always on” meeting room with a standard URL and saved configurations and content, it's easy to establish regular meetings with a familiar environment.

SAP Acrobat Connect Professional Meeting goes beyond Web conferencing and enables you to create engaging, interactive rapid e-learning classes or product presentations directly from Microsoft PowerPoint. With little or no learning curve, developers can include audio, Adobe Flash-based video, and Sharable Content Object Reference Module (SCORM)-compliant user polling or testing.

SAP Acrobat Connect Professional Meeting is just as attractive from a participant's point of view. Meeting or training attendees can self-register through most popular Web browsers and receive automatically generated confirmations and reminders. Using the intuitive browser-based interface, they can participate in face-to-face discussions using inexpensive Web cameras. Best of all, however, they can get right to the business of learning and communication; with Adobe Flash on 98% of the world's microcomputers, there's rarely anything to configure or install.

Another distinguishing feature of the SAP Acrobat Connect Professional Meeting application is its unique approach to recording events. Rather than capturing an entire class or meeting as one long event, which must be replayed in its entirety for subsequent viewing, SAP Acrobat Connect Professional Meeting records at the content and event levels. Viewers can use the meeting index to navigate to the most relevant content quickly – with no need to waste valuable time watching content that may not be relevant to them.

Benefits of SAP® Acrobat Connect Professional Meeting

- Improve learning and productivity through high-impact, live Web-based seminars and training and engaging on-demand presentations.
- Speed implementations and upgrades with interactive change management presentations.
- Reduce travel time and expense while speeding internal and customer communication cycles.
- Deliver live demonstrations and presentations wherever there is an Internet connection.

SAP Acrobat Connect Professional Learning by Adobe

The SAP Acrobat Connect Professional Learning application by Adobe is ideal for organizations that need to create, manage, and deliver effective and economical internal training. Your organization can use SAP Acrobat Connect Professional Learning to schedule courses, enroll learners, grant viewing permissions, automate enrollment notices and reminders, and track learner statistics. Your training staff or subject-matter experts can develop curricula combining live classes, multiple self-paced training courses, and other content. In addition, they can easily define course prerequisites, specify optional and required modules, and establish progressive learning paths for self-paced training, live instructor-led training, and external events.

Like SAP Acrobat Connect Professional Meeting, SAP Acrobat Connect Professional Learning includes the tools to create powerful standards-compliant e-learning classes directly from Microsoft PowerPoint. Your training developers can begin with a Microsoft PowerPoint presentation, add Adobe Flash animations,

Benefits of SAP® Acrobat Connect Professional Learning

- Deliver and track individual progress and organizational results to truly realize the benefits of a blended learning program in a fraction of the time – and at a fraction of the cost – of traditional e-learning.
- Enable subject matter experts to rapidly create engaging training materials at low cost and with little or no learning curve.
- Train employees on new initiatives, reducing rollout costs, ensuring adoption, and minimizing ongoing support.
- Meet compliance and safety regulations by rapidly training end users on policies and procedures, reducing business risk and ensuring that employees are well informed.

and integrate quizzes using a wide range of popular question types. They can create custom audiovisual feedback, establish pass/fail criteria, and enable tracking of user completion and success.

Expand Your Knowledge Network

Together, SAP Acrobat Connect Professional Meeting and SAP Acrobat Connect Professional Learning provide a versatile solution for adaptable, secure, and scalable corporate learning and communications.

For example, both corporate and external learners will be able to self-register for and attend live e-learning sessions using SAP Acrobat Connect Professional Meeting. Using SAP Acrobat Connect Professional Learning, the sponsoring organization can establish curricula, deliver rapid e-learning, and track class completion and test scores.

Find Out More

Whether you use them to create, deliver, and monitor rapid e-learning; enable internal videoconferencing and live e-learning; or reach out to customers and partners, the SAP Acrobat Connect Professional applications will provide you with genuinely easy-to-use, reliable, and extensible tools that put the benefits of Web-based communication within your reach.
