Capitalized terms not otherwise defined herein shall have the meanings set forth in the Agreement. **“CPU License” or “CP”** means the limited right to install the software Program on a Machine and access it by no more than the number of Central Processing Units (CPUs) indicated in the applicable Exhibit A. The number of users shall be limited only by the capacity of the licensed CPUs, and may include internal users within your organization, and external users outside of your organization accessing the Program via the Internet (“Internet Users”). Internet Users may not Use the Program to develop or modify applications or perform other programming tasks, and may only Use the Program in conjunction with your applications. **“Standalone Seat” or “SS”** means the limited right to install the Program on a single workstation Machine (and not a server Machine) for access solely by the single workstation Machine upon which it resides. **“Standby”** means the Program shall be limited to the Machine running the Operating System Software, at a site shown on the Exhibit A. A Standby Program is a copy of a Program that is deployed on a separate Machine as a backup to process data that is periodically updated from data residing on your primary production Machine. In the event of a failure of the production copy or production Machine, the Standby Program may be used to access and process such updated data. A Standby Program may not be accessed or used in production at the same time as the primary production copy. The Standby Program must be licensed for the same number of Servers, Seats, Concurrent Users, Connections, or CPUs, as applicable, as the production copy.

2. Scope of License and Restrictions.

a. The Program is a suite containing several software components. Use of all licensed components of the Program is limited to the same CPUs and Seats for which you have acquired this Program license, and the components of this Program may not be unbundled or used separately.
